

Press Release

14th April 2008

Profit from Environmental Standard Compliance

Industrial Manufacturers of Engineering Components are continuously demanding their suppliers change to environmentally superior chemical consumables. ISO 14001 is one internationally recognised standard on environmental management designed to enable companies to balance profitability with a reduction of environmental impact.

ecoLake have developed proven systems to help achieve, maintain and perform the continuous improvement required by ISO 14001. This is done through the replacement of dangerous and hazardous chemicals used within manufacturing and engineering processes with safer, proven and trusted alternatives. Hazardous chemicals are replaced with high performance, environmentally friendly, VOC compliant, water based chemicals and biodegradable products made from renewable sustainable resources.

ecoLake have the technical expertise and experience to recommend the most appropriate high performance product for your business . All the products recommended are widely used and proven in fields as diverse and demanding as metal cleaning and aerospace.

Benefits of the ecoLake service include:

- Opening your operation up to new markets and customers
- Gaining competitive advantage over non compliant competitors
- Maintaining existing market access at a time when customers are increasingly demanding the use of environmentally sound products
- Reducing the cost of disposal of hazardous waste
- Improving your company profile with customers and with the local community
- Reducing insurance premiums with the removal of flammable solvents, and minimising the risk of environmental impact on site and surrounding areas
- Improving the health and safety profile for your work force by upgrading the working conditions and cleanliness of the shop floor.

ecoLake can work with your company to introduce the changes needed in a timely and cost efficient manner. We will support the company and staff throughout the transition and beyond, drawing on years of technical and practical application knowledge.

If you think gaining ISO 14001 accreditation, moving to more environmentally friendly processes, or simply reducing your health and safety burden could benefit your business then contact ecoLake by visiting www.ecolake.co.uk, calling 01527 830 580 or emailing info@ecolake.co.uk

ecoLake is a business unit of Lake Chemicals and Minerals Ltd., a Technical Distribution Specialist with head office in Redditch, UK, responsible for the sales and marketing of speciality chemicals, minerals and technical products to customers in the UK and Ireland.
